Linux Repair Commands Every Hacker Must Know

Terminal Repair Cheat Sheet for
Admins, Hackers & Troubleshooters

By HexSec

```
root@hexsec:~# sudo cat linux_fix_commands.txt
```

```
1 # Fix DNS, ping, curl, nmap, netcat, etc...
2 # Fix DNS, ping, curl, nmap, netcat, etc...
3 # Fix DNS, ping, curl, nmap, netcat, etc...
4 # Fix DNS, ping, curl, nmap, netcat, etc...
5 # Fix DNS, ping, curl, nmap, netcat, etc...
6 # Fix DNS, ping, curl, nmap, netcat, etc...
7 # Fix DNS, ping, curl, nmap, netcat, etc...
8 # Fix DNS, ping, curl, nmap, netcat, etc...
9 # Fix DNS, ping, curl, nmap, netcat, etc...
10 # Fix DNS, ping, curl, nmap, netcat, etc...
11 # Fix DNS, ping, curl, nmap, netcat, etc...
12 # Fix DNS, ping, curl, nmap, netcat, etc...
13 # Fix DNS, ping, curl, nmap, netcat, etc...
14 # Fix DNS, ping, curl, nmap, netcat, etc...
15 # Fix DNS, ping, curl, nmap, netcat, etc...
16 # Fix DNS, ping, curl, nmap, netcat, etc...
17 # Fix DNS, ping, curl, nmap, netcat, etc...
18 # Fix DNS, ping, curl, nmap, netcat, etc...
19 # Fix DNS, ping, curl, nmap, netcat, etc...
20 # Fix DNS, ping, curl, nmap, netcat, etc...
```

System Health & Performance

`uptime` — Check system load

`hostnamectl` — Show system info

`uname -a` — Kernel details

`lsb_release -a` — Distro details

`whoami` — Current user

`id` — User permissions

`date` — System time

`timedatectl` — Timezone status

`free -h` — Memory usage

`vmstat 1` — Live system stats

`top` — Process monitor

`htop` — Better process monitor

`ps aux` — Running processes

`pgrep nginx` — Find process ID

`pidof sshd` — Get service PID

`kill PID` — Stop process

`kill -9 PID` — Force stop caution

`pkill firefox` — Kill by name

`lscpu` — CPU details

`systemd-analyze blame` — Slow boot services

Network & DNS Fixes

`ip a` — Show IP addresses

`ip route` — Show routes

`ping 8.8.8.8` — Test internet

`ping google.com` — Test DNS

`traceroute google.com` — Trace route

`ss -tulnp` — Listening ports

`curl -I URL` — Check HTTP headers

`wget --spider URL` — Test URL access

`nmcli dev status` — Network devices

`cat /etc/resolv.conf` — DNS config

`resolvectl status` — DNS status

`resolvectl query google.com` — Test DNS lookup

`dig google.com` — DNS details

`nslookup google.com` — Simple DNS lookup

`ip neigh` — Show ARP table

`sudo ip link set eth0 up` — Enable interface

`sudo dhclient -v eth0` — Renew DHCP

`curl ifconfig.me` — Public IP

`sudo systemctl restart NetworkManager` — Restart networking

`sudo systemctl restart systemd-resolved` — Restart DNS resolver

Services, Boot & Startup

`systemctl status nginx` — *Check service*
`sudo systemctl start nginx` — *Start service*
`sudo systemctl stop nginx` — *Stop service*
`sudo systemctl restart nginx` — *Restart service*
`sudo systemctl reload nginx` — *Reload config*
`sudo systemctl enable nginx` — *Enable on boot*
`sudo systemctl disable nginx` — *Disable on boot*
`systemctl list-units --failed` — *Failed services*
`sudo systemctl reset-failed` — *Clear failed state*
`sudo systemctl daemon-reload` — *Reload unit files*
`journalctl -u nginx` — *Service logs*
`journalctl -xe` — *Recent errors*
`journalctl -p err -b` — *Boot errors*
`last reboot` — *Reboot history*
`systemctl get-default` — *Current boot target*
`sudo systemctl set-default multi-user.target` — *CLI boot mode*
`sudo systemctl set-default graphical.target` — *GUI boot mode*
`systemctl list-timers` — *Scheduled timers*
`crontab -l` — *User cron jobs*
`sudo reboot` — *Restart system caution*

Disk, Filesystem & Storage

`df -h` — *Disk usage*

`du -sh *` — *Folder sizes*

`du -ah . | sort -h` — *Find large files*

`lsblk` — *List disks*

`blkid` — *Disk UUIDs*

`findmnt` — *Mount tree*

`mount` — *Mounted filesystems*

`sudo mount -a` — *Test fstab mounts*

`cat /etc/fstab` — *Boot mount config*

`sudo umount /mnt/disk` — *Unmount disk caution*

`journalctl --disk-usage` — *Journal size*

`sudo journalctl --vacuum-time=7d` — *Clean old logs*

`sudo apt clean` — *Clear apt cache*

`find /var/log -type f -size +100M` — *Find big logs*

`stat file.txt` — *File metadata*

`file unknown.bin` — *Detect file type*

`ls -lah` — *Detailed file list*

`sudo fsck -f /dev/sdXN` — *Repair filesystem caution*

`sudo e2fsck -f /dev/sdXN` — *Check ext filesystem*

caution

`sudo tune2fs -l /dev/sdXN` — *Ext filesystem info*

Packages, Users & Permissions

`sudo apt update` — *Refresh packages*

`sudo apt upgrade` — *Upgrade system*

`sudo apt --fix-broken install` — *Fix broken packages*

`sudo dpkg --configure -a` — *Finish interrupted install*

`apt list --upgradable` — *Show updates*

`apt policy package` — *Package version info*

`sudo apt install package` — *Install package*

`sudo apt remove package` — *Remove package caution*

`sudo apt autoremove` — *Remove unused packages*

`which command` — *Locate executable*

`ls -l` — *View permissions*

`namei -l /path/file` — *Path permissions*

`chmod 644 file` — *Safe file perms*

`chmod 755 script.sh` — *Executable script perms*

`chmod +x script.sh` — *Add execute bit*

`chown user:user file` — *Change owner*

`groups username` — *User groups*

`sudo usermod -aG group user` — *Add to group*

`sudo visudo` — *Edit sudoers safely*

`passwd` — *Change password*

Logs & Error Hunting

`sudo journalctl -b` — Current boot logs
`journalctl -b -1` — Previous boot logs
`journalctl -f` — Watch logs live
`journalctl --since "1 hour ago"` — Recent log window
`journalctl -k` — Kernel journal logs
`dmesg -T` — Kernel messages readable
`dmesg -T | grep -i error` — Find kernel errors
`tail -n 100 /var/log/syslog` — Last syslog lines
`tail -f /var/log/syslog` — Watch syslog live
`grep -Ri "failed" /var/log` — Search failed logs
`grep -Ri "error" /var/log` — Search error logs
`zgrep -i error /var/log/syslog*.gz` — Search rotated logs
`less /var/log/syslog` — Browse syslog safely
`ls -lh /var/log` — Check log sizes
`sudo du -sh /var/log/*` — Log folder usage
`sudo logrotate -d /etc/logrotate.conf` — Test log rotation
`sudo logrotate -f /etc/logrotate.conf` — Force rotation
caution
`logger "HexSec log test"` — Send test log
`sudo less /var/log/kern.log` — View kernel log
`sudo less /var/log/auth.log` — View auth log

Hardware, Drivers & Devices

`lspci` — *Show PCI devices*

`lsusb` — *Show USB devices*

`sudo lshw -short` — *Hardware summary*

`sudo lshw -C network` — *Network hardware*

`lsmod` — *Loaded kernel modules*

`modinfo module` — *Driver module info*

`sudo modprobe module` — *Load kernel module*

`sudo modprobe -r module` — *Unload module caution*

`rfkill list` — *Wireless block status*

`sudo rfkill unblock all` — *Enable wireless radios*

`xrandr` — *Display outputs*

`xrandr --auto` — *Auto-fix display*

`aplay -l` — *List sound cards*

`pactl info` — *Audio server info*

`pactl list short sinks` — *Audio output list*

`sensors` — *Temperature readings*

`upower -e` — *Power devices*

`upower -i DEVICE` — *Battery details*

`udevadm monitor` — *Watch device events*

`sudo udevadm trigger` — *Reload device events*

SSH, Firewall & Remote Access

`ssh -v user@host` — *Debug SSH login*

`ssh -p 2222 user@host` — *Use custom port*

`ssh-keygen -R host` — *Remove stale host key*

`ssh-copy-id user@host` — *Install public key*

`sudo sshd -t` — *Test SSH config*

`sudo systemctl status ssh` — *Check SSH service*

`sudo systemctl restart ssh` — *Restart SSH caution*

`ss -tlnp | grep :22` — *Check SSH listener*

`sudo ufw status verbose` — *Firewall status*

`sudo ufw allow 22/tcp` — *Allow SSH port*

`sudo ufw deny 22/tcp` — *Block SSH caution*

`sudo ufw reload` — *Reload UFW rules*

`sudo firewall-cmd --state` — *Firewalld status*

`sudo firewall-cmd --list-all` — *Show firewall rules*

`sudo firewall-cmd --reload` — *Reload firewalld*

`sudo nft list ruleset` — *Show nftables rules*

`sudo iptables -L -n -v` — *Show iptables rules*

`sudo fail2ban-client status` — *Fail2ban overview*

`sudo fail2ban-client status sshd` — *SSH ban status*

`nc -vz host 22` — *Test remote port*

Backup, Sync & Recovery

`rsync -avh source/ dest/` — Sync folders

`rsync -avh --dry-run source/ dest/` — Preview sync safely

`rsync -azh --progress source/ dest/` — Sync with progress

`cp -a source dest` — Preserve file attributes

`cp file file.bak` — Quick file backup

`tar -czf backup.tar.gz folder/` — Create tar backup

`tar -xzf backup.tar.gz` — Extract tar backup

`tar -tf backup.tar.gz` — List backup contents

`zip -r backup.zip folder/` — Create zip backup

`unzip backup.zip` — Extract zip file

`sha256sum file` — Verify file hash

`md5sum file` — Legacy hash check

`diff -ru old/ new/` — Compare folders

`cmp file1 file2` — Compare binary files

`find . -name "*.bak"` — Find backup files

`find . -type f -mtime -1` — Files changed today

`stat file` — File timestamps

`lsattr file` — Check file attributes

`sudo chattr -i file` — Unlock immutable file

`sync` — Flush disk writes

Config, Text & Script Fixes

`sudoedit /etc/hosts` — *Edit safely as root*

`nano file` — *Simple terminal editor*

`vim file` — *Advanced terminal editor*

`grep -n "text" file` — *Find line number*

`grep -R "Listen" /etc` — *Search configs*

`sed -n '1,120p' file` — *Preview file section*

`awk '{print $1}' file` — *Extract first column*

`cut -d: -f1 /etc/passwd` — *Extract usernames*

`sort file` — *Sort lines*

`uniq -c file` — *Count duplicates*

`wc -l file` — *Count lines*

`head -n 20 file` — *First lines*

`tail -n 20 file` — *Last lines*

`cat -A file` — *Show hidden chars*

`dos2unix script.sh` — *Fix Windows endings*

`bash -n script.sh` — *Check Bash syntax*

`shellcheck script.sh` — *Audit shell script*

`source ~/.bashrc` — *Reload shell config*

`env | sort` — *Show environment*

`history | tail` — *Recent commands*
